

TITLE: Perceptions of stuttering, thoughts, and feelings among adults who stutter

PRIMARY RESEARCHER: Michael P. Boyle, Ph.D., CCC-SLP

ABSTRACT: The purpose of this project is to conduct research on perceptions of stuttering, thoughts, and feelings of adults who stutter. The results will ultimately be used to develop more effective therapies for stuttering.

Researchers from Oklahoma State University are conducting a study that looks at attitudes and feelings of people who stutter in order to gain a deeper understanding of the disorder and ultimately improve treatment outcomes. This study has been approved by the Institutional Review Board at Oklahoma State University and the National Stuttering Association Research Committee.

If you are 18 years of age or older and a person who stutters, we are requesting your help in **completing this questionnaire by clicking the link below**. *We also request that you forward this message to anyone else you know who stutters (age 18 or above). If you are a chapter leader or member of a support group, please forward this message to the other members of your group.*
