

Title: Uncertainty and stuttering

Primary investigator: Michael P. Boyle, Ph.D., CCC-SLP

This study seeks to better understand the uncertainties faced by people who stutter regarding their stuttering. It is also of interest to determine if uncertainty is linked to personal feelings of well-being. Participants will be individuals who stutter (age 18 and above), and they will complete the study by filling out a 10-15 minute survey. Ultimately, this study will help in identifying important variables for assessment and treatment of people who stutter. Participant data will remain anonymous, and participants will be entered into a drawing to win one of four Amazon gift cards.
