

Title

Remote Study of Speech Production in People who Stutter and/or Clutter

Primary Researcher

Dr. Evan Usler

The University of Delaware is conducting a research study to better understand how people who stutter and/or clutter say certain sounds, words, and sentences. The primary investigator, Evan Usler, is a person who stutters and an assistant professor who investigates speech motor control related to stuttering and cluttering using remote audiovisual technology (such as Zoom). We are seeking participants, aged 8 to 65 years old, who stutter and/or clutter from across the country to participate in a single hour Zoom session. During this session, you will complete a few computer tasks and your computer microphone and webcam will record you while speaking. You will be compensated \$20 for your time. We hope that this study will help to better understand stuttering and cluttering and to improve future treatment approaches.
